

Shank cutters **one-time use**

In order to meet our client's expectations and help to resolve problems connected with regrinding of DIA tools, we decided to introduce new cutters type TJD-08

TJD-08 tools are one-use shank cutters. The PKD tip has been reduced to minimum, so that the cutters are not subject to regrinding and costly regeneration.

Shank cutters from TJD-08 group are a very convenient offer for companies working with wood-based materials and plastics on CNC routers.

New economical solution for shank cutters:

- One machine setting without corrections after regrinding
- No problems with servicing (regeneration)
- Reduction in shipment costs
- Very low price
- Long life and high cutting quality

Machined material types:

- Chipboard
- Laminated board
- MDF & HDF
- CORIAN
- Hard exotic wood
